

HELPFUL TIPS FROM GRIFFIN DENTAL LAB

Launch of 3D Printing! Phase One – Night guards

Griffin Dental Lab is excited to announce we have teamed up with two of the industry's leading 3D Printing services: **Carbon and Keystone!** What does this mean for you? We can now fabricate nightguards from digital scans as well as actual models! So, if your office can digitally scan the patient's impressions, you can send the file directly to us for fabrication. You'll be able to send your **.STL** files via **Medit, 3Shape Communicate**, or **email**. **Itero** will be coming soon. Also, with our digital storage service, lost or damaged appliances can be remade easily without any rework or patient visits!

Combining Carbon 3D Printing and Keysplint Soft together, we feel offers the ultimate nightguard. This provides optimum fit and patient comfort. This adds a stronger protection against bruxism and more fracture resistance than standard splint material. As a bonus, Keysplint Soft can be warmed in water for easy placement and minimum chairside adjustment. This saves valuable time for the doctors and their staff.

We are eager to begin this new undertaking with all of you! As always, with any question or comment, please don't hesitate to contact us at **214.378.7300**. Additional 3D digital scanned appliances are forthcoming soon.
